Humans.... are What?

Mohd. Mehdi

I am thinking from 2023 that what we are! What humans are actually? And reached at the result that we may be the robots of our "just above" creator. (or say, immediate creator). Just like, we humans are in the path of creating a new creation, for example AI robots, we humans were created by our immediate creator and they may be creation of their "just above" creator and so on, leading to the supreme creator. What may be the supreme creator, I don't understand. Different people have their different interpretations... I am not going to involve in them. But we humans were created to do tasks or works that our immediate creator can't do for example — space exploration.

I think, we humans are the advanced robots of our immediate creator. But we are not the only robots of our immediate creator. There may be many creations of our immediate creator exploring different directions in space, from the planet of our immediate creator.

As said above, our creator is not the only creator, there may be chain of creators "just above" to each other. For example— Creator A created Creator B, Creator B created Creator C and so on till the Creator X who created Humans and Humans are creating Sophia like robots. Sophia is I guess say, 1st generation robot. Once Sophia like robots become super advanced and capable of adapting surrounding environment, these robots will be sent to universe exploration.

" There may be 1st generation Humans on their immediate creator's planet. "

The chain will look like: Creator A → Creator B → Creator C → ... → Creator X → Humans → AI robots → Mobots (suggestive name of the Creations of AI robots)

There must be any "secret" method to send informative signal from us to our immediate creator. The secret method should be any organ or body part of Humans and animals and plants OR there may be animal(s) which work as "transmitter" to send Signal after collecting from other Creations (Humans, Plants, microbes, unknown creatures) from here to immediate creator.
